VIDEO CALLS: ZOOM + VERCEL SETUP

GGG.Cafe · For the site admin · About 25 minutes

Mentors and head coaches book Zoom calls with one player, and the call runs inside GGG.Cafe. Her parents are invited to every call, everyone waits in the waiting room, and nothing is recorded. The site needs **two Zoom apps** and **six keys in Vercel**. Until all six are set, the site says "Video calls aren't connected to Zoom yet".

Keep every key private: never email or text them, never put them in the code, and never give them a name starting with `NEXT_PUBLIC_`.

PART 1 · ZOOM ACCOUNT

About 10 minutes, at zoom.us, signed in as the account owner.

1. Use a **paid Zoom plan (Pro or higher)**. Free meetings end at 40 minutes. If the left menu shows **Upgrade to Pro**, the account is still on the free plan.
2. Pick the **one licensed Zoom user** every call is booked under. Usually that's the account owner's own login. Its email is `ZOOM_HOST_EMAIL`. One Zoom user hosts one meeting at a time, so the site books one call at a time.
3. Click your **profile picture** (top right) > **Settings**. Tabs run across the top: **Zoom AI**, General, **Meeting**, **Recording** and more. There is no Security tab: **Security is a section inside the Meeting tab**.
4. Open the **Meeting** tab. The menu on its left jumps to each section. Change these:
   - **Security: Waiting Room** on; **Require a passcode when scheduling new meetings** on.
   - **Schedule Meeting: Allow participants to join before host** off.
   - **In Meeting (Basic): Meeting chat - Direct messages** off; **Screen sharing** on, with "Who can share?" set to **Host Only**; **Allow removed participants to rejoin** off.
5. Open the **Recording** tab: **Local recording**, **Cloud recording** and **Automatic recording** all off.
6. Open the **Zoom AI** tab (the first one). These calls include a minor and nothing from them is kept, so in its **Meeting** section:
   - **Participants can request the host to start in-meeting AI features:** off.
   - **Allow users to ask questions in-meeting with AI:** off.
   - **Restrict Zoom AI features and transcription when external users join:** on.
   - Further down, any **meeting summary** or **transcript** setting: off.
7. **Padlocks**, only if other people sign in to this Zoom account: make the same changes under **Admin** > **Account Management** > **Account Settings** (in newer menus, profile picture > **Admin Center** > **Settings**), and click each setting's **padlock** so nobody can change it. If you're the only user, skip this step.

The site also asks Zoom for the waiting room, no joining before the host and no recording on every call it books. These settings make sure nothing in Zoom undoes that.

PART 2 · APP 1: BOOKS THE MEETINGS

A Server-to-Server OAuth app, at marketplace.zoom.us, signed in with the same Zoom account.

1. Click **Developers** (lower left) to open **Created Apps**. Click the **+** next to "Developer", then **Build an app**.
2. Choose **Server-to-Server OAuth app**, then **Create**. Name it, for example "GGG.Cafe calls".
3. **App credentials** page: copy the **Account ID**, **Client ID** and **Client Secret** somewhere private. They become `ZOOM_ACCOUNT_ID`, `ZOOM_CLIENT_ID` and `ZOOM_CLIENT_SECRET`.
4. **Information** page: add a short description, a company name, and a developer name and email. Activation needs the name and email.
5. **Feature** page: leave event subscriptions off.
6. **Scopes** page > **Add Scopes**. Add these three:
   - `meeting:write:meeting:admin` (create a meeting)
   - `meeting:read:meeting:admin` (view a meeting)
   - `meeting:delete:meeting:admin` (delete a meeting)
   - Optional: a User scope for viewing a user's token, if you find one. Without it, the site uses the meeting's start link.
7. **Activation** page: activate the app.

The account owner already has every permission this needs, so an owner skips Zoom's role steps and its "Enable developer tools" section (that's for apps running inside the Zoom desktop app). Only if the Developers link or Server-to-Server OAuth is missing: on zoom.us, Admin > User Management > Roles > Role Settings > Advanced features, tick View and Edit for "Zoom for developers" and "Server-to-Server OAuth app".

PART 3 · APP 2: SIGNS PEOPLE INTO THE CALL

A General App with the Meeting SDK, on the same Created Apps page.

1. Click **+** > **Build an app** > **General App**. If it asks, choose "Admin-managed".
2. If it requires an "OAuth Redirect URL", enter `https://www.ggg.cafe`. The site doesn't use it.
3. **Features** page > **Embed** tab > turn **Meeting SDK** on.
4. **Basic Information** page: copy this app's **Client ID** (`ZOOM_SDK_KEY`) and **Client Secret** (`ZOOM_SDK_SECRET`). Don't mix them up with App 1's keys.
5. Don't publish it. Zoom only requires review and publishing to join meetings outside your own account, and every call is in your account.

PART 4 · VERCEL

About 3 minutes, at vercel.com.

1. Open team **GGG** > project **gggcafe** > **Settings** > **Environment Variables**.
2. Add the six variables below, one at a time: Vercel's **Key** box gets the name in the left column, its **Value** box what you copied from Zoom. Tick **Production** and mark each one **Sensitive**.
3. Go to **Deployments** > the top production deployment > the **...** menu > **Redeploy**. New variables only take effect in a new deployment.

KEY (TYPE EXACTLY)	VALUE (PASTE WHAT YOU COPIED)
`ZOOM_ACCOUNT_ID`	App 1 (Server-to-Server OAuth): Account ID
`ZOOM_CLIENT_ID`	App 1: Client ID
`ZOOM_CLIENT_SECRET`	App 1: Client Secret
`ZOOM_SDK_KEY`	App 2 (General App, Meeting SDK): Client ID
`ZOOM_SDK_SECRET`	App 2: Client Secret
`ZOOM_HOST_EMAIL`	The email address of the Zoom login every call is booked under

PART 5 · TURN IT ON AND TEST

1. Signed in as a **site admin**, open the **Switchboard** for the team. Turn **Video calls (Zoom)** on. The "Zoom isn't connected yet" note should be gone.
2. If mentors should book calls too, the head coach turns on **Mentors > Video calls**. It starts off.
3. As head coach, open **Coaches Dugout > Calendar > Video calls**. Book a call 15 minutes ahead with a player who has a parent account.
4. Ten minutes before the start, open the call page, press **Start the call**, and allow the camera and microphone.
5. On a phone, sign in as that parent, open the call from the family page and join. Let them in from the waiting room.

IF SOMETHING GOES WRONG

"Zoom didn't accept the app keys": App 1's three keys are wrong, or the app isn't activated.
"Zoom said no: ...": a missing App 1 scope, or `ZOOM_HOST_EMAIL` isn't a licensed user in your account.
The call says the signature is invalid: the SDK keys came from the wrong app. Use App 2's.
Still "Zoom isn't connected yet": a variable name is misspelled, or the site wasn't redeployed.
